# KERNOWPRINT®

SCREEN, LITHO & FLEXO

KernowPrint for screen, litho and flexo is a wide range of synthetic materials, mainly PET based, aimed at conquering difficult applications whilst helping you add profit to your business.

Included in the KernowPrint range are a number of products specifically developed for design and repro applications. These include manual draft and pen plot media through to CAD papers and films.

The benefit of PET film is that it allows you to be price competitive yet it will still deliver all of the advantages of polyester, e.g. dimensional stability, water resistance and tear proof quality. Available in white, clear and in a wide range of thicknesses, KernowPrint for screen, litho and flexo also includes a variety of self-adhesive materials.

KernowPrint has the added benefit of a surface coating which gives improved image quality and ink adhesion, which is typically a challenge for many flexible materials when used on UV processes. Furthermore, KernowPrint coated can also be used with toner printers. The range includes clear, translucent and white films, a pallet of colours and a choice of adhesives, not only mid-tak, high-tak, and marine grade (to BS5609), but also an easily removable suction cling that can be re-used many times.

## STICKY SITUATION!

KernowPrint products are also available as bespoke self-adhesives. We carry a wide choice of adhesives such as cling, low-tack, repositionable, permanent, to marine grade certified.

**WATERPROOF  
& HIGHLY TEAR  
RESISTANT**

## KernowPrint Screen, Litho & Flexo Range of Products

<b>DESIGN &amp; REPROGRAPHICS PRODUCTS</b>	Manual drafting films
	Natural tracing papers
	Plotting film
	Double matt inkjet
	Reprographics solutions for PPC in clear/white/translucent
	Reprographics films for Diazo systems
<b>COATED &amp; UNCOATED FILMS FOR LITHO, SCREEN &amp; FLEXO APPLICATIONS</b>	Stabilised PPC/laser films in clear/white/translucent
	Basic pre-treated polyester films in clear, white and translucent
	Adhesive films in clear, white and translucent, with a range of adhesives from cling to marine grade permanent
	Backlit films
	Lightblock films, both polyester and polypropylene
	Matt white pre-print films
	Coloured films are available in pastel blue, green, yellow & pink, opaque yellow and vivid yellow, red, green, blue and orange
Bespoke coloured films to order	
Black PET - ideal for white inks
