

# Backlits

## Why choose KernowJet Opaline Gloss 201?

Backlit films are very technical products - they are much more than just a 'milky' film. KernowJet Opaline Gloss 201 combines all the benefits that printing companies and end-users look for when it comes to lightboxes and backlit displays. Especially important is the excellent day/night performance: the back-coat will hide the light elements when the film gets used with back lighting and ensure the even light diffusion through the film. The special coating and glossy front face will be ideal for day performance in reflected light.

Certified for  
HP Latex Inks

For larger print jobs, we can offer longer rolls - let us know your requirements.

Glossy finish for optimum day/night performance  
Very high colour density, intense and bright colour gamut
